

Aurora Casino Equipment

The Aurora Slot System may be used as a flexible means of updating old cabinets to a modern video or spinning reel system or may be installed in a new cabinet to provide a completely new look. Its main features are:

- 1) Distributed processor architecture enhances reliability and security.
- 2) Easily expandable.
- 3) Compact components will fit most cabinets.
- 4) Custom components to drive nearly any peripheral can be quickly designed and will easily integrate into machines with our upgrade system installed.
- 5) Buy just the components you need.
- 6) Video, stepper reel or simultaneous video, stepper conversion available.
- 7) Patented symbol selection algorithm for reel type games allows very small increments in setting hit frequency and return to player.
- 8) Patented memory verification allows automatic independent memory check and fail-safe protection if memory fails check.
- 9) Program memory verification may be done remotely.
- 10) Machine accounting meters can be read and setup can be done with a walk-around handheld unit.

We can provide Class III games or games that use our patent-applied-for skill game concept. Networking will be available depending upon customer demand.
